

# About Us

Shasta Community Health Center (SCHC) is a non-profit primary health care system and is a Federally Qualified Health Center (FQHC). SCHC is based in Redding, California and has served Shasta County and surrounding counties and communities since 1988. Shasta Community Health Center's mission is to provide quality health care services to the medically under-served populations of the community.

## **S.H.A.R.P. Mission**

The SHARP program aims to facilitate and empower SCHC scribes pursuing medical/PA/NP education by providing scribing opportunities, shadowing experiences, mentoring, lecture attendance, and the chance to present a quality improvement project. Our program aims to foster, inspire, and assist local individuals committed to returning as healthcare providers in rural Northern California.

### **What is scribing?**

Scribes will work alongside providers, assisting with documentation, ordering labs and diagnostic tests, and making referrals. Their efforts play an important role in helping physicians provide effective and efficient care.

## **Program Opportunities**

### **Shadowing**

Explore various specialties to help form early interest in a specific field and encourage a framework to become a well-rounded provider.

### **Mentorship**

Experience one-on-one mentorship from our medical Residents that can help with applications, interviews, letters of recommendations, and scholarship opportunities.

### **Education**

Participate in medical lectures for resident physicians and attend educational sessions focused on the management of fundamental healthcare issues.

## **Quality Improvement Project**

Put what you've learned to the test by creating and presenting a healthcare quality improvement project that will optimize patient care and health outcomes.

### **Objective**

Find an area of improvement within the organization, describe its challenges, implement a possible solution, and compare pre and post intervention data.

This is an excellent opportunity to showcase your work on a quality improvement project for a Federally Qualified Health Center for your professional school applications.
